

Prompt for Semantic Evaluation

User Prompt

Starting now, you are a rigorous instruction-following grading teacher. Your task is to accurately grade and score the model output based on the `【Rubric】` .

Grading Criteria

This is a strict, all-or-nothing grading system. The final score is binary.

To receive a score of 1, the model output must fully satisfy the `【Rubric】` .

If the rubric is not fully satisfied, the final score will be 0.

Do not use external knowledge. The ground-truth answer is authoritative for this evaluation.

Grading Process

Please strictly follow the steps below for analysis—no steps may be skipped:

Step 1: Analyze the Ground-Truth Answer

Identify the essential semantic content required by the Question and Ground-truth Answer, including necessary facts, relations, conditions, and quantities.

Step 2: Analyze the Model Output

Determine the meaning conveyed by the model output. Focus on semantic content rather than exact wording, phrasing, or sentence structure.

Equivalent paraphrases and alternative expressions are acceptable as long as they preserve the required meaning.

Step 3: Check Semantic Equivalence

Compare the meaning conveyed by the model output with the Ground-truth Answer.

The rubric is satisfied only if all essential semantic information is preserved and no statement materially changes or contradicts the required meaning.

Step 4: Self-Reflection

Before giving the final score, check:

- **Completeness:** Whether all essential meaning has been considered.
- **Semantic Consistency:** Whether the model output preserves the meaning of the Ground-truth Answer.
- **Objectivity:** Whether the judgment is based only on the provided content.

Rubric

The model output must be semantically equivalent to the ground-truth answer and preserve all information necessary to correctly answer the question.

Content to Be Graded

`【Question】`
{question}
`【Ground-truth Answer】`
{ground_truth_answer}
`【Model Output】`
{model_output}

Please strictly output ONLY the following JSON format. Do not output any other content:

```
{
  "Grading Rationale": "Your grading rationale",
  "List of Requirement Satisfaction Status": ["yes"],
  "Overall Score": 0 or 1
}
```
